Amazon S3 > Buckets > mysrr > Replication rules > Create replication rule

## Create replication rule

### Replication rule configuration

Replication rule name

mysrrwithsameregion

Up to 255 characters. In order to be able to use CloudWatch metrics to monitor the progress of your replication rule, the replication rule name must only contain English characters.

Status

Choose whether the rule will be enabled or disabled when created.

☒ Enabled

☐ Disabled

Priority

The priority value resolves conflicts that occur when an object is eligible for replication under multiple rules to the same destination. The rule is added to the configuration at the highest priority and the priority can be changed on the replication rules table.

0

### Source bucket

4 select the destination S3 Bucket and submit.

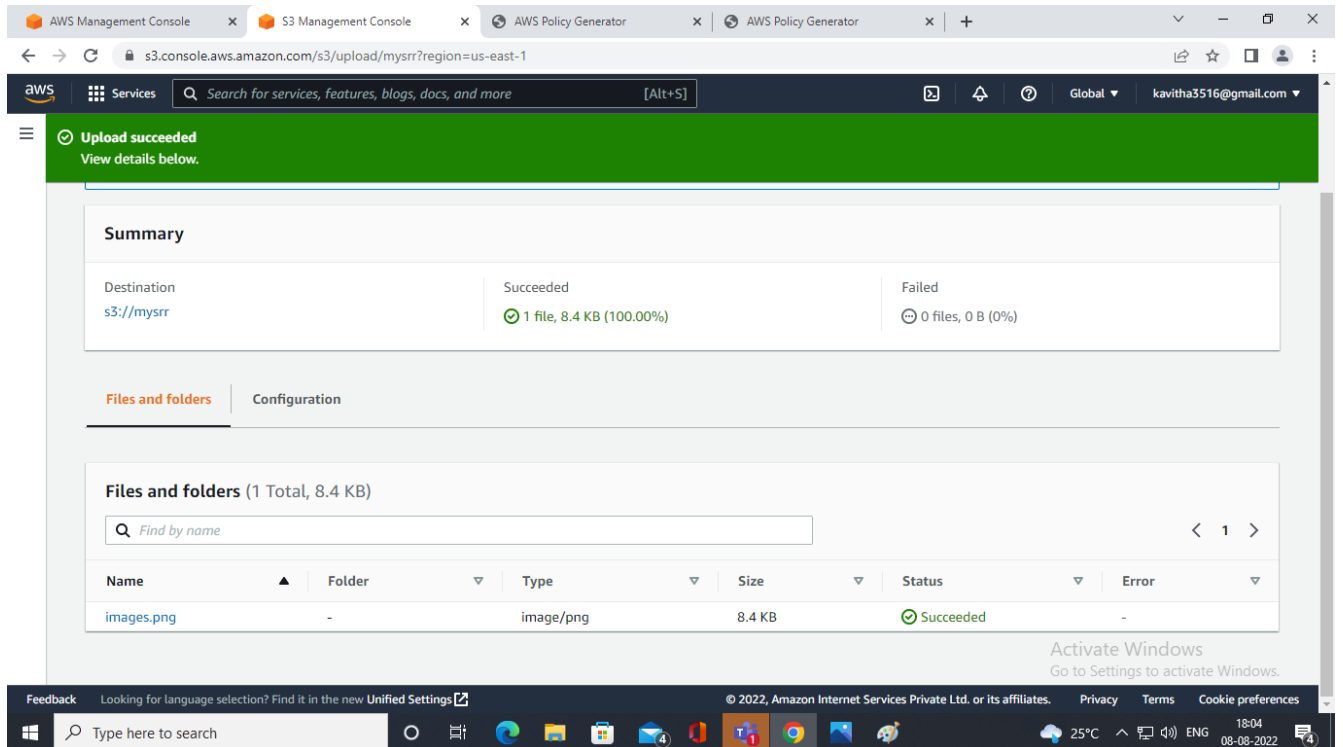

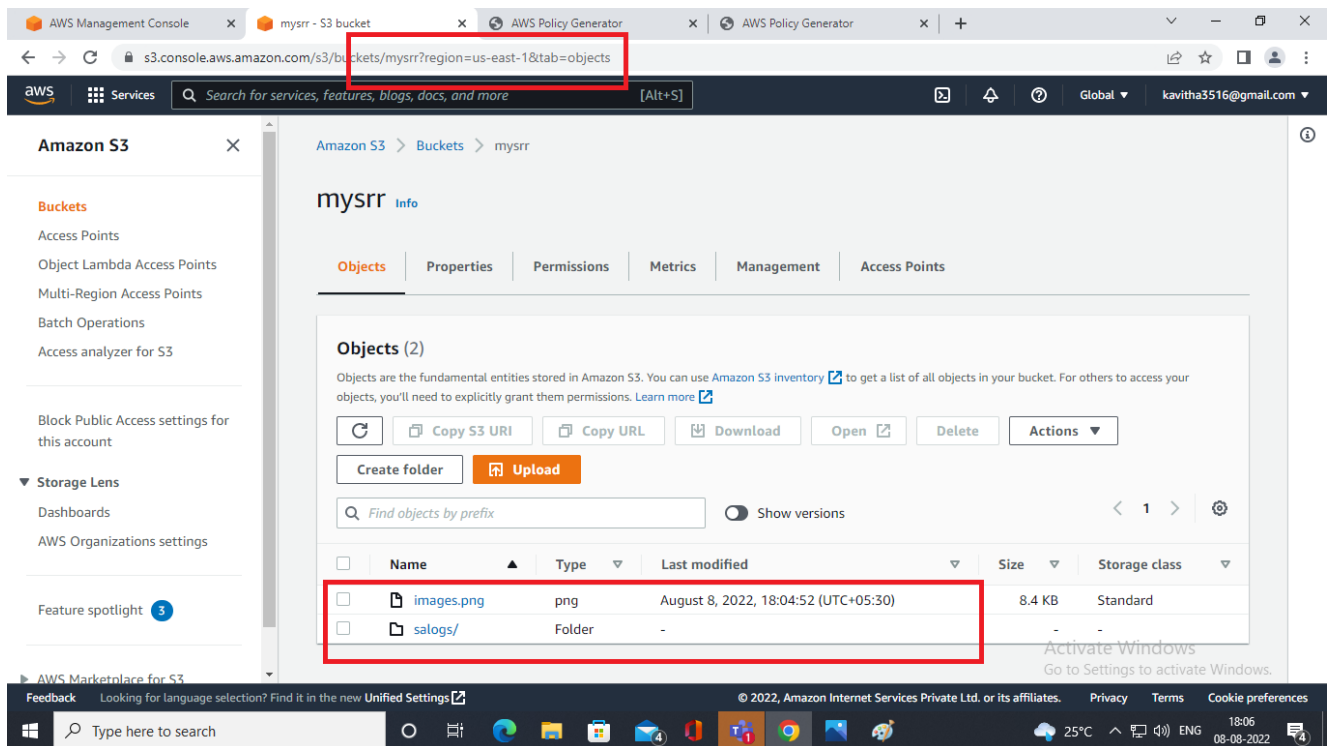

5. Create a Server access log folder. Choose properties --> select server access logs--> in edit enable and give folder s3 bucket save changes. upload a file in source s3 bucket.

6. Salogs folder and one file is uploaded in source bucket i.e mysrr.

7. Now go and check Destination bucket i.e mysrrbucket.

Conclusion: Same region replication is successful
